SYSTEMTECHNIK

trainee

RT-Systemtechnik GmbH

In Rheine, in the heart of the North Münsterland, is the Company headquarter. In more than 25 years of experience in hardware and software development, **RT-Systemtechnik GmbH** has become one of the leading electronics original equipment manufacturers in vehicle and special vehicle construction as well as in the agricultural and construction machinery sector.

The core business is the development and series production of operating and control devices and camera systems.

RT product groups

- Automotive electronics
- Camera technology and image processing
- Electronic engine control units
- Control and operating devices
- Security solutions for vehicles

RT (service) benefits

- Development of hardware and software
- FPGA design
- Standards management
- International contract manufacturing with quality management

Excellent perspectives

RT-Systemtechnik GmbH is pleased to be able to enrich its team with young, motivated trainees every year. RT offers young professionals a learning environment with the latest standards and excellent in-house support opportunities.

The employees at RT are happy to respond to the individual needs of the trainees, so that they are regularly among the best in their year. They have thus created optimal conditions for their future careers.

We will train you (m/f/d) to

IT Specialist for application development/ -programming

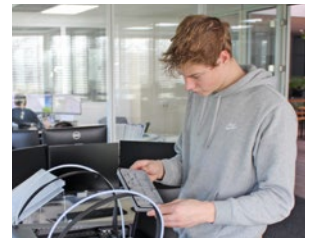

IT specialists who are interested in the area of application decide on development, expects a professional life without Routine. Every day and every order is different. New solutions often have to be found.

To ensure this, they are familiar with databases and have a deep understanding of operating systems.

Because the programming languages and operating systems used are constantly evolving, they must always be at the cutting edge of technical development.

This is the only way they can creatively develop new ideas together with their colleagues. Because they are not lone fighters, but team players who work together to develop and implement customer-specific solutions.

Pre-condition: advanced technical college entrance qualification / higher education entrance qualification

... or

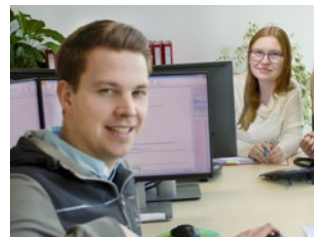

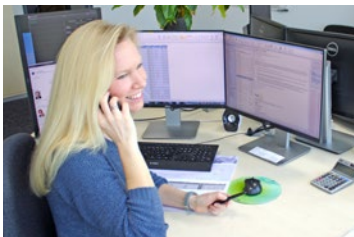

Industrial business management assistant

Industrial business management assistants control business processes in the company. In sales, they prepare offers and communicate with customers. In purchasing, they determine requirements, negotiate with suppliers and conclude contracts.

You will develop strategies in the field of PR / marketing and implement them. In production, they are responsible for the best possible process and production flows.

Industrial business management assistants are needed for all tasks in the commercial area. Since they communicate with customers as well as with suppliers, employees and management, they are considered an important interface and control point in the company.

Pre-condition: Technical college entrance qualification / higher commercial school

... or

Electronics engineer for devices and systems

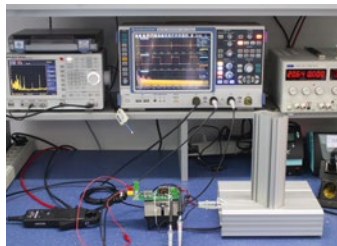

Electronics engineers for devices and systems manufacture electronic devices. They control and monitor all processes involved in the manufacture of assemblies. They install and configure software or operating systems, check components and carry out end-of-line tests.

You create production documents, set up production machines or test structures and are the most active part of production and the direct contact person for quality management.

Electronics engineers for devices and systems support technicians and engineers in the implementation of new developments through to series production.

The job description covers various areas, such as for example activities accompanying development, series production, error analysis / repair, maintenance and customer service.

Pre-conduction: technical college entrance qualification

... or

Specialist for warehouse logistics

Specialists in warehouse logistics receive goods of all kinds and check the accompanying documents, quantities and condition. They organize the unloading of the goods, sort and store them properly in designated storage areas.

They ensure optimal storage conditions and regulate temperature and humidity. They set the material flow with various loading aids, the forklift or pallet truck etc., safe.

In cooperation with order processing, they put together deliveries, pack goods and ensure collection by external shipping service providers.

They are also responsible for load securing. In addition, they take care of the necessary materials for internal production processes.

Pre-conduction: technical college entrance qualification

Internship anytime!

Just take a peek...

The student internship is an important experience, so that the later career choice is not a wrong decision.

RT-Systemtechnik GmbH offers the opportunity to get to know the RT training occupations in an internship and to get a first impression of the professional and working world in an electronics industry.

In the internship, you can find out which skills and abilities are required in the respective training occupation and whether they match your own ideas.

RT offers places for student internships in all apprenticeships.

There is also the opportunity for interested students and retrainees to absolve an internship.

After the apprenticeship
